

Otar Davitashvili

Applied AI / Full-Stack Engineer

Tbilisi, Georgia · +995 557 28 26 16 · otowork3@gmail.com · github.com/WERSIT35 · linkedin.com/in/otar-davitashvili/

Professional Summary

Applied AI and full-stack engineer building production systems across browser, Node.js, and data layers. Owns end-to-end delivery from modular frontend architecture and secure REST APIs to data integrity, testing, and operations. Combines applied generative AI work with disciplined engineering to deliver reliable, maintainable products.

Technical Skills

AI/Generative AI — Applied AI, Generative AI, Claude

Languages — TypeScript, JavaScript, SQL

Frontend — Angular, Standalone Components, Signals, RxJS, lazy loading, code splitting

Backend/APIs — Node.js, Fastify, REST APIs, operator control planes

Databases — PostgreSQL, memory-first write-through persistence

Cloud/DevOps — AWS, DevOps, automated end-to-end testing

Security — HMAC signatures over raw request bytes, nonce replay protection, rate limiting

Engineering — Modular architecture, parity testing, deterministic seeded-RNG systems, audit ledgers, browser automation

Professional Experience

Freelance Full-Stack Developer — 09/2024–Present

- Owned end-to-end development of full-stack systems spanning frontend interfaces, Node.js services, REST APIs, and database-backed workflows.
- Built modular, production-oriented features with attention to secure APIs, data integrity, and automated validation.

Angular Developer, PetC — 12/2025–06/2026

- Developed four core platform features in a modular Angular codebase using Standalone Components, Signals, and RxJS.
- Implemented lazy loading and code splitting while integrating REST APIs for focused, maintainable feature delivery.
- Worked cross-functionally to align frontend implementation with product and engineering needs.

AML & Game Control Officer, BetLive — 09/2024–Present

- Performed SQL analysis and investigated transaction anomalies in support of AML and game-control operations.
 - Used browser automation to examine relevant workflows and support operational review.
 - Collaborated cross-functionally on investigations, controls, and issue follow-through.
-

Selected Projects

Banana X

- Built a shared math engine used by the browser, Node.js RGS, and RTP simulator, with parity tests validating consistent behavior across implementations.
- Developed a Fastify/TypeScript RGS and operator control plane with launch tokens and automated end-to-end operator lifecycle testing.
- Implemented HMAC signatures verified over raw request bytes, nonce replay protection, and rate limiting.
- Added deterministic seeded-RNG rounds, a hash-chained append-only audit ledger, and Postgres-backed memory-first write-through persistence.

TattooGen

Multi-Protocol Chip/Key Reader

Education

MSc DevOps — Business and Technology University, expected 2026

BSc Computer Science — University of Georgia, 2019–2025

Certifications

Claude Cowork; AI Fluency Framework & Foundations; Claude Code in Action; JavaScript Algorithms & Data Structures; Front-End Development Libraries; Introduction to AWS Solutions; Responsive Web Design.

Languages

Georgian — Native · **English** — Full professional proficiency · **Russian** — Professional working knowledge
